PROFILE

I am a full stack software developer with a passion for ensuring business success by delivering the best product to the client maximizing client retention and minimizing turnover. I believe that every project is complete not by just solving the problem at hand but covering all bases to handle any problems that may arise in the future. I also believe that every complete project can always be improved to not only optimize solution delivery but also improve the quality of said solution.

WORK EXPERIENCE

Software Development Intern

The Jitu

April-2023-June2023

- This role was a training oriented contract.
- It involved intensive coaching from some of the best engineers in the development field for a three month period. In this time I was tasked with different duties which helped me improve my skills greatly.
- I got to learn how to design immaculate user interfaces on design platforms such as figma to implement designs as specified by the client.
- I worked on developing different applications in that time getting to understand deeply the workings of the different parts of a software layout from design translation to software deployment.
- I got to practice test driven development where I learnt how to break down an application into the most fundamental parts and write comprehensive unit tests for them to make sure that every section works as required.
- I worked in teams where I not only helped develop but also identify and correct bugs in my teammates' submissions to ensure the quality of the code was high in terms of performance and readability.
- I was also introduced to end to end testing where I learnt how to use cypress testing technology to make sure that the entire system worked as desired as a whole and not just the integral parts individually.
- Communication training was another core field I improved on. Collaborating with others in a team improved my communication skills immensely with both my teammates and the rest of the staff at the company.

IT Support Attachee

Nyandarua County Government

January 2022 - June 2022

- Here I worked for three months as an ICT attachee.
- My duties included network management, maintenance and of all Electronic devices in the office.
- I was also involved in maintaining internet connectivity for the National youth centers in the County.
- Here I reported to a supervisor and mainly helped in completing all the tasks that were assigned to me by my supervisor.

- Certificate of Completion of The Software Development Training

PERSONAL ATTRIBUTES

- A focused individual with a strong educational background in information technology and business aspects of the different areas in the extensive field.
- I am an outgoing person who enjoys reaching out and interacting with people.
- I am a goal oriented person who always works with a plans both short and long term.
- I am a person who loves working in a team and making sure that progress on any project happens not from an individual point but as a team.
- As a developer, I am a person who will go out of my way to make sure that the clients expectations and interests are exceeded leaving them satisfied and eager to work with me again.
- I have the ability to work under the pressure of close deadlines and margins and deliver to the best of my abilities.
- I enjoy learning and in an always evolving field, I love keeping my skills up to date with the current trends.
- I have grown to love writing tests for my code regardless of whether it is a large project of a simple algorithm.
- I have excellent technical writing skills with an ability to adapt less technical terminology for non technical audiences.
- I am a self-driven person who does not need supervision to deliver as expected.
